

# TopLeaf

The easier way to render DITA and XML

TopLeaf is a professional DITA and XML publishing system from Turn-Key Systems. TopLeaf combines a powerful rendering engine with a stylesheet development toolkit that allows complex document styles to be set up quickly. There's no need to master complex technologies like XSL-FO or call in programmers to style your documents. Using TopLeaf is simple and direct — the easier way to render DITA and XML.

## TopLeaf and DITA

- Built-in support for DITA publishing
- Integration with different editing and/or production environments
- Stylesheet development toolkit
- Single source publishing
- Output to PDF, RTF, HTML and eBook
- Workstation or API
- Low purchase, setup and maintenance costs

The most flexible and cost effective DITA and XML publishing tool in the world today!

TopLeaf offers a unique DITA publishing experience, with built-in features to facilitate the creation of efficient and powerful stylesheets for styling DITA documents.

The inheritance mechanism of DITA is fully supported, allowing a single stylesheet rule to apply to many different elements. Stylesheets can also take advantage of DITA element specialization.

TopLeaf comes with a ready-made stylesheet you can use to quickly create output from any DITA document. By copying and customizing this stylesheet you can tailor the output to your precise requirements.

## Single source publishing

TopLeaf excels when your XML content must be delivered in several formats or updated and delivered at frequent intervals.

Define the styling requirements for multiple output formats within a single stylesheet in a fraction of the time required by traditional methods, without the need for specialist programming or typesetting staff.

TopLeaf can get your data where it's needed in a form that maximises its value. With TopLeaf you'll realize how versatile your content is.

## Faster stylesheet development

TopLeaf's stylesheet development toolkit makes it easy to create professional quality output without the need for specialized programming skills.

A TopLeaf stylesheet declares a set of rules that interpret DITA and XML mark-up as context-sensitive formatting instructions. The rules work together to transform your content into PDF, RTF, HTML and eBooks.

Create your stylesheet using TopLeaf's Mapping and Page Layout Editors, typeset your content, and then use the TopLeaf Mapping Assistant to verify that your stylesheet rules meet your publishing requirements.

## Flexible system integration

TopLeaf is perfect in automated environments, including server-based integrated applications based around content management systems (CMS). TopLeaf's API\* interface integrates easily with popular DITA and XML authoring tools and third party applications.

Create and maintain document styles using TopLeaf's stylesheet development toolkit, store those stylesheets within your CMS, and then generate output documents on demand.
